Application Services

Data-Core helps you balance cost, complexity and capacity when it comes to your most important applications.

Application Development and Maintenance

Technology is changing rapidly, project timeframes are short and resources are limited. Data-Core's development and implementation teams offer practical, efficient and cost-effective services that enable business change. Balancing technical and functional business experience, our consultants work side by side with clients to ensure that the application solution is the right match for clients' requirements.

With over 25 years of experience, our teams are well versed in a wide variety of technologies and platforms, including methodology-based solutions, component-based development, web services and enterprise application integration.

When needed, Data-Core can provide application development solutions by breaking up the tasks into their onshore and offshore components — thus significantly reducing development costs without sacrificing quality or timeliness. With minimum downtime and volatility, your applications stay optimally geared to provide rapid responses to key change requests and business requests.

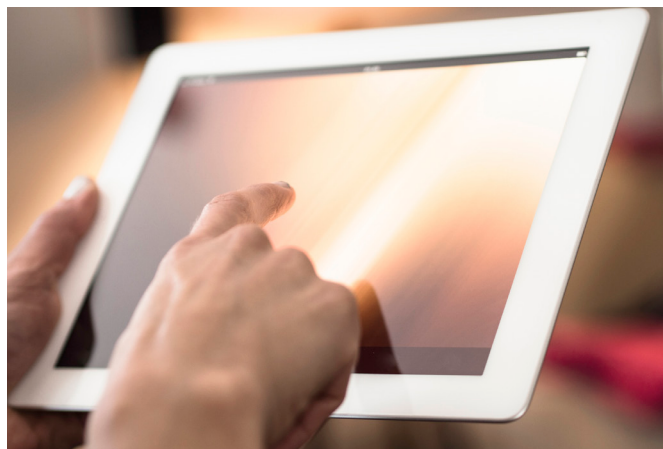

Enterprise Application Development and Integration

When an organization makes a decision to buy a packaged software solution they face a new challenge in implementing, configuring and managing that application to get the best return on investment out of their off-the-shelf purchase. Data-Core has rich experience implementing a wide range of off-the-shelf software solutions, and can help you get your money's worth from the investment.

Our Enterprise Resource Planning (ERP) practice can assist in a first time implementation, maintenance and support of an existing implementation, or in extending an already implemented ERP system to SCM or CRM.

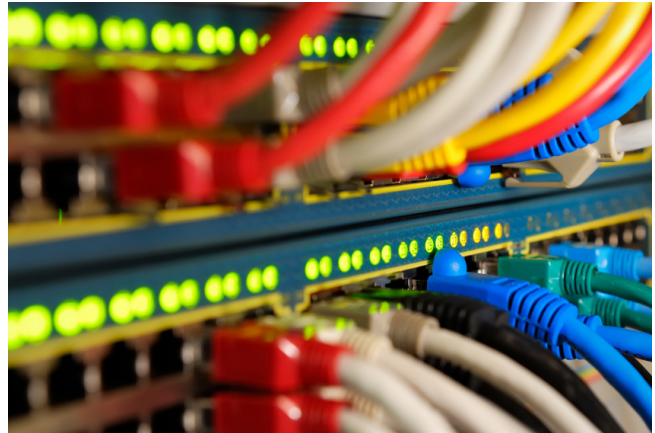

Data-Core's web technology solutions integrate web front-ends and e-software packages with existing ERP solutions, client-server applications, legacy systems and databases. We utilize multiple integration techniques including data integration tools, message oriented middleware and workflow automation tools.

With a unique combination of domain, technology and process expertise, we help our clients achieve world-class, robust, highly scalable and business process-driven Enterprise Application Integration (EAI) architecture to address business requirements.

Data-Core has partnerships with leading ERP and middleware framework providers to ensure high performance solutions for clients. We provide the following ERP services to our clients:

- Consulting
- Architecture & Design
- Development & Deployment
- Testing

Software Quality Assurance Testing

Born out of SQA services provided for its own product development projects, Data-Core's SQA practice has grown and matured into a 100-plus member full-service independent SQA unit. Our team has provided SQA services to a number of businesses, particularly small- and medium-sized enterprises (SME's).

Data-Core's Software Testing and Quality Assurance practice is a specialized, mature professional service that is built upon the following key strengths of the organization:

- Experience in large-scale software testing for domestic and international corporations
- Extensive technical expertise developed from years of SQA experience
- Depth and competence across diverse technical platforms and tools
- Innovative global delivery model that reduces cost for our clients without compromising on quality
- Ability to effectively gain and retain knowledge of customer applications
- Ability to scale up and meet peak demand for resources without having to maintain excess capacity
- Data-Core's track record of successful engagements and satisfied customers

Data-Core's Application Services serve the entire life cycle needs of your applications, from inception to retirement. Our services are designed to create the most optimized user experience and deliver on the demands of a digitally-enabled enterprise.

We work with you to understand your business requirements, so that we are not just meeting our service level agreements, but enabling you to meet or exceed yours.

Discover the *Data-Core* advantage and see how we can help you.

About Data-Core Systems

Data-Core Systems, Inc. is a provider of information technology, consulting and business process outsourcing services.
